### 3 DIFFUSION EQUATION

#### 3.1 Equation in general form

$$\partial_t u + \nabla \cdot \nabla u = f \quad (1)$$

### 3.2 Example-0001

#### 3.2.1 Mathematical model

We solve the following scalar equation,

$$\nabla \cdot \nabla u = 0 \quad \Omega = [0, 2] \times [0, 1] \times [0, 1], \quad (2)$$

with boundary conditions

$$u = 0 \quad x = y = z = 0, \quad (3)$$

$$u = 0 \quad x = 2, y = z = 1. \quad (4)$$

No material parameters to specify.

#### 3.2.2 Computational model

- This example uses generated meshes
- Commandline arguments are:
  - length along x-direction
  - length along y-direction
  - length along z-direction
  - number of elements in x-direction
  - number of elements in y-direction
  - number of elements in z-direction
  - interpolation order (1: linear; 2: quadratic)
  - solver type (0: direct; 1: iterative)
- Commandline arguments for tests are:

```
