LIST OF TABLES

Table 1	Initials of people working on examples, in alphabeti-	
	cal order (surnames)	4
Table 2	Example-0001 to example-0099. Who is doing what?	
	What is finished? See Table 1	5
Table 3	Example-0101 to example-0199. Who is doing what?	
-	What is finished? See Table 1	6

This document contains information about examples used for testing *OpenCMISS-iron*. Read: How-to¹ and [1].

- 1.1 Cmgui files for cmgui-2.9
- 1.2 Variations to consider
 - Geometry and topology

Dimensions

Extents

Number of elements

Interpolation order

Generated or user meshes

quad/hex or tri/tet meshes

- Initial conditions
- Load cases

Dirichlet BC

Neumann BC

Volume force

Mix of previous items

- Sources, sinks
- Time dependence

Static

Quasi-static

Dynamic

• Material laws

Linear

Nonlinear

- Material parameters, anisotropy
- Solver

Direct

Iterative

• Test cases

Numerical reference data

Analytical solution

• A mix of previous items

1.3 Folder structure

TBD..

HOW TO WORK ON THIS DOCUMENT

In this section, indicate what you are working on or if a given example was finished

- no mark: to be done
- x: currently working on it
- xx: done

Initials	Full name
EA	Ekin Altan
CB	Christian Bleiler
AH	Andreas Hessenthaler
TK	Thomas Klotz
AK	Aaron Krämer
BM	Benjamin Maier
SM	Sergio Morales
MM	Mylena Mordhorst
HS	Harry Saini

Table 1: Initials of people working on examples, in alphabetical order (surnames).

Interpolation order	linear	
Mesh type	generated	
Boundary conditions	Dirichlet	
Equation	Laplace	
Dimensions	ЗД	
Name of example	Example-0001 Example-0002	:
Initials	AH	
Progress	×	

Table 2: Example-0001 to example-0099. Who is doing what? What is finished? See Table 1.

Mesh type Interpolation order	linear	
Mesh type	generated	
Boundary conditions N	Dirichlet	
Equation	Elasticity	
Dimensions Equation	2D	
Name of example	Example-0101 Example-0102	:
Initials	AH, HS	
Progress	×	

Table 3: Example-0101 to example-0199. Who is doing what? What is finished? See Table 1.

3 DIFFUSION EQUATION

3.1 Equation in general form

$$\partial_t \mathbf{u} + \nabla \cdot \nabla \mathbf{u} = \mathbf{f} \tag{1}$$

3.2 Example-0001

3.2.1 *Model*

We solve the following equation,

$$\nabla \cdot \nabla u = 0 \qquad \qquad \Omega \in [0, 2] \times [0, 1] \times [0, 1], \tag{2}$$

with boundary conditions

$$u = 0 x = y = z = 0, (3)$$

$$u = 0$$
 $x = 2, y = z = 1.$ (4)

No material parameters to specify.

3.2.2 Results

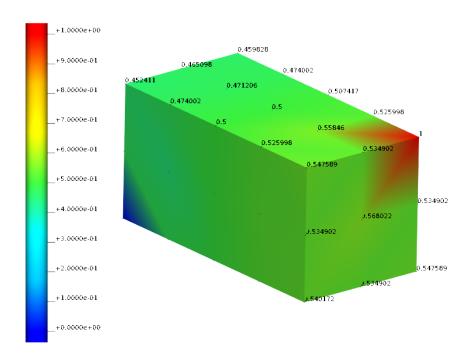

Figure 1: Results.

4 LINEAR ELASTICITY

4.1 Equation in general form

$$\partial_{tt}\mathbf{u} + \nabla \cdot \mathbf{\sigma}(\mathbf{u}, \mathbf{t}) = \mathbf{f}(\mathbf{u}, \mathbf{t})$$
 (5)

4.2 Example-0101

4.2.1 *Model*

We solve the following equation,

$$\nabla \cdot \boldsymbol{\sigma}(\boldsymbol{u},t) = \boldsymbol{0}(\boldsymbol{u},t) \qquad \qquad \boldsymbol{\Omega} \in [0,160] \times [0,120], t \in [0,5], \tag{6}$$

with time step size $\Delta_t = 1$ and boundary conditions

2D: specify thickness, Young's modulus and Poisson's ratio.

4.2.2 Results

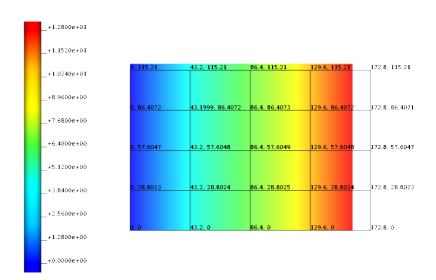

Figure 2: Results.

5 FINITE ELASTICITY

6 NAVIER-STOKES FLOW
